Signal intelligence report

Input Source `signal_0403_fsk.iq` (IQ)

Signal classification	
FSK	
Confidence	99%

Signal metrics	
Sample rate	1.00 MHz
Duration	8.2 ms
Occupied Bandwidth (99% Power)	253.9 kHz
SNR	12.8 dB
Peak frequency	59.8 kHz
Samples	8,192

Classification breakdown		
FSK		99%
QPSK		1%

QAM16				0%
-------	--	--	--	----

Extracted features				
Feature	Value	Unit	Description	
Carrier Center Offset	-2144.3	Hz	Estimated carrier center offset from baseband reference (f_center = (f_upper + f_lower)/2)	
Lower FSK Tone	-63.8	kHz	Dominant negative-frequency data tone (f0)	
Upper FSK Tone	59.6	kHz	Dominant positive-frequency data tone (f1)	
Tone Separation	123.4	kHz	Peak-to-peak tone frequency separation (2 * Delta_f)	
Signal-to-Noise Ratio	12.8	dB	Estimated signal power over noise floor	
Occupied Bandwidth (99% Power)	253.9	kHz	Estimated 99% occupied spectral power bandwidth	
Symbol Rate	125000	Baud	Waveform-estimated symbol/ baud rate (Ref: 100000 Baud Waveform/metadata disagreement)	
Higher-Order Cumulant C40	0.003	—	4th-order cumulant reflecting constellation symmetry	
Higher-Order Cumulant C42	0.899	—	4th-order cumulant reflecting power variance	
Peak-to-Average Power Ratio	0.2	dB	Crest factor of signal envelope	
Emitter RF Fingerprint ID	RF-FP-A67AF131AE4592B8	—	Derived RF feature-hash identifier

The AI Transformer model classified this signal as FSK with 98.5% confidence (KNOWN). DSP physical analysis provides supporting evidence with an estimated SNR of 12.8 dB, carrier center offset of -2144.3 Hz (tones: -63.8 / 59.6 kHz), and occupied bandwidth of 253.9 kHz (99% power). Higher-Order Cumulants (C40=0.003, C42=0.899) and spectral profile support this hypothesis with multi-modal evidence score of 0.90. Demodulation produced 816 recovered raw bits; data validation has not yet been established.
